

FUTURE OF CIMMYT

Feeding the more than 9.5 billion people estimated to occupy the earth by 2050 bodes to be a difficult task. An even greater cooperation between global researchers, partners and donors is critical to continue ensuring sustainable livelihoods for those most affected. CIMMYT is committed to fulfilling more ambitious objectives for research, improved seed varieties and capacity building with systematic assessments of impact along diverse socioeconomic, conservation, grain yield and quality variables. The pressure for ground-breaking innovation in agriculture makes all the more urgent CIMMYT's deepening investment in the multidisciplinary, integrative research and development partnerships it has fostered for fifty years.
